DocMind: The web-to-chat interface.

SCRAPE. INDEX. ASK.

Static content becomes dynamic knowledge.

Enter a URL. Our AI scrapes and indexes the content instantly, transforming read-only text into an interactive Q&A session.

Stop guessing. Start citing.

Black Box Generative AI

DocMind Contextual AI

Standard AI models fabricate information when they lack context.
DocMind restricts itself to the facts contained within your specific URL.

Step 1: Define your source.

A screenshot of a web browser's address bar. The address bar is a light gray rounded rectangle containing the text `https://stripe.com/docs/api`. A blue mouse cursor arrow points to the end of the text. A blue speech bubble with the word "Paste" in white text is positioned above the address bar, with a line pointing to the end of the URL. The background of the browser window is a light gray grid.

No complex setup or API keys required. Simply point DocMind to the web page you need to analyze.

Paste any URL.

Step 2: The indexing engine.

The system instantly reads the site structure, indexing the text to prepare it for natural language querying.

Step 3: Interrogate the text.

What are the API rate limits?

The API allows for 100 read operations per second and 50 write operations per second in the live mode.

Ask questions exactly as you would to a human expert who just read the page.

Receive instant, relevant answers.

The Zero Hallucination Promise

Most AI tools struggle with accuracy. DocMind is engineered for **Zero Hallucination**. If the answer isn't in your source URL, the AI won't invent it.

Trust, but verify.

Every response is anchored to the source material. You don't just get an answer; you get the location of the truth.

The Closed-Loop Logic.

By strictly bounding the AI's knowledge to the indexed URL, we eliminate external noise and fabrication.

Digest density in seconds.

Perfect for researchers and analysts. Parse long-form articles, whitepapers, and reports without reading every word.

Navigate technical complexity.

Ideal for developers. Find specific functions, parameters, or installation steps in complex documentation instantly.
